Biodiversity of Coastal Organisms

Students will investigate the major coastal habitats, the diverse organisms that inhabit them, and the complex ecological processes that connect and sustain these communities. A central theme is the importance of biodiversity for ecosystem function and the critical challenges posed by human impacts.

Marine Ecology

This course provides an introduction to the ecology of marine environments, with a specific emphasis on Gulf Coast marine ecosystems. We will focus on key concepts in the field, including foundational literature, key processes structuring flora and fauna, and how anthropogenic activities (e.g., habitat loss, overfishing, climate change) impact natural ecosystems

Prerequisites - General Biology

Field & Lab Measurements

The course provides hands-on experience with a range of field and laboratory methods commonly used in marine sciences, with a focus on coastal ecology methods. The class combines a range of field and lab activities, to provide training and skills across a range of methods.

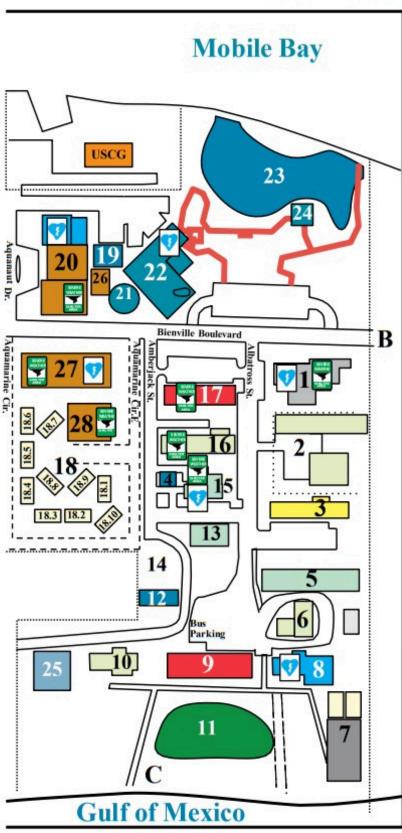

Marine Operations & Research

Students will conduct collaborative experiments at local field sites. This will involve collecting and analyzing samples, analyzing the subsequent data, and using primary scientific literature to write a short paper and conduct an oral presentation.

Prerequisites - General Biology
